

TEA CATALOGUE 2016 /2017

Agarmet Corporation

If you are cold, Tea will warm you;
If you are too heated, it will cool you;
If you are depressed, it will cheer you,
If you are excited it will calm you.

About Us!

Agarmet Corporation is a progressive company covering the global market with high quality Indian teas. We are one of the most leading exporters of tea from India, supplying top quality Darjeeling, Assam (CTC and Orthodox) and Nilgiri teas to the international market at competitive prices. This would not be possible were it not for the fact that we provide highly personalised, efficient and prompt service.

We are also one of the finest blenders of tea in India, with the blending being carried out by the group's professional team at the Company's several warehouses, located in Calcutta. We are well equipped to handle a multitude of different blends, of very demanding clients. In fact we have made it a speciality to cater to any blend requested of us.

Currently we are exporting Indian tea to Germany, Japan, the Netherlands, UK, USA and the Middle East. We export tea bags, both single and double chambered, with soft and hard tags and envelopes made of paper and aluminium foil. We also market a unique blend under our own brand name, viz. "Vintage" CTC Tea, in Duplex cartons of 225 / 450 grams to the Middle East.

We guarantee our support and co-operation to our clients at all times, so that they may reap the benefits through the easy and efficient availability of the world famous, best-selling Indian teas. Our clients will naturally benefit from this close co-operation and efficient business support that we provide.

Tea Gardens in India

“A cup of tea is an excuse to share great thoughts with great minds”

Cristina Re

Procedure on how Tea is produced

Tea professionals often spend years to understand just one style of tea production, so we certainly can't cover all of the nuances and varieties in one class. That said, tea production falls into one of two styles (Orthodox or Non-orthodox, the latter usually being the CTC, or 'Crush-Tear-Curl,' method), and includes five basic processing steps. These steps can be adjusted depending on the style of tea being produced.

The following pages, gives a description of each of these steps.

Step 1

PLUCKING: The leaves are harvested by hand, usually ranging between just the unopened bud to the top three leaves and the bud, depending on the tea being created. In order to make hand plucking possible, the tea "trees" are pruned into waist-high bushes. After plucking, the leaves are sorted for uniformity and any stems, twigs, broken leaves, etc. are removed.

Step 2

WITHERING: The leaves are laid out to wilt and wither for several hours to prepare them for further processing. Tea leaves, even fresh tender ones, aren't very pliable. Without withering, they would shatter and crumble when rolled and shaped. During withering, the leaves are very gently fluffed, rotated and monitored to ensure even exposure to the air.

Step 3

ROLLING: This is where thousands of varieties in tea appearance are created, and also where the process of developing flavor is started. The softened tea leaves are rolled, pressed or twisted to break the cell walls of the leaf, wringing out the juices inside. This exposes enzymes and essential oils in the leaf to oxygen in the air - the start of oxidation.

Step 4

OXIDATION: After rolling, the leaves are laid out to rest for several hours, allowing oxidation to take place. Oxidation is the process in which the oxygen in the air interacts with the now-exposed enzymes in the leaf, turning it a reddish-brown color and changing the chemical composition. This step also has the greatest impact in the creation of the many wonderful and complex flavors in tea. The length of this process depends on the style of tea being produced and the ambient conditions at the time. Depending on the type of tea, from here the leaves could be rolled again and oxidized further, or not.

Step 5

FIRING: The final step in the production process is to "fire" or heat the leaves quickly to dry them to below 3% moisture content and stop the oxidation process. A good, even drying with very low residual moisture also ensures the tea will keep well.

CTC Production

CTC, or Crush-Tear-Curl production is a very different process. All five steps of Orthodox processing are performed, but much more rapidly and in a limited fashion. CTC was invented specifically for the black tea

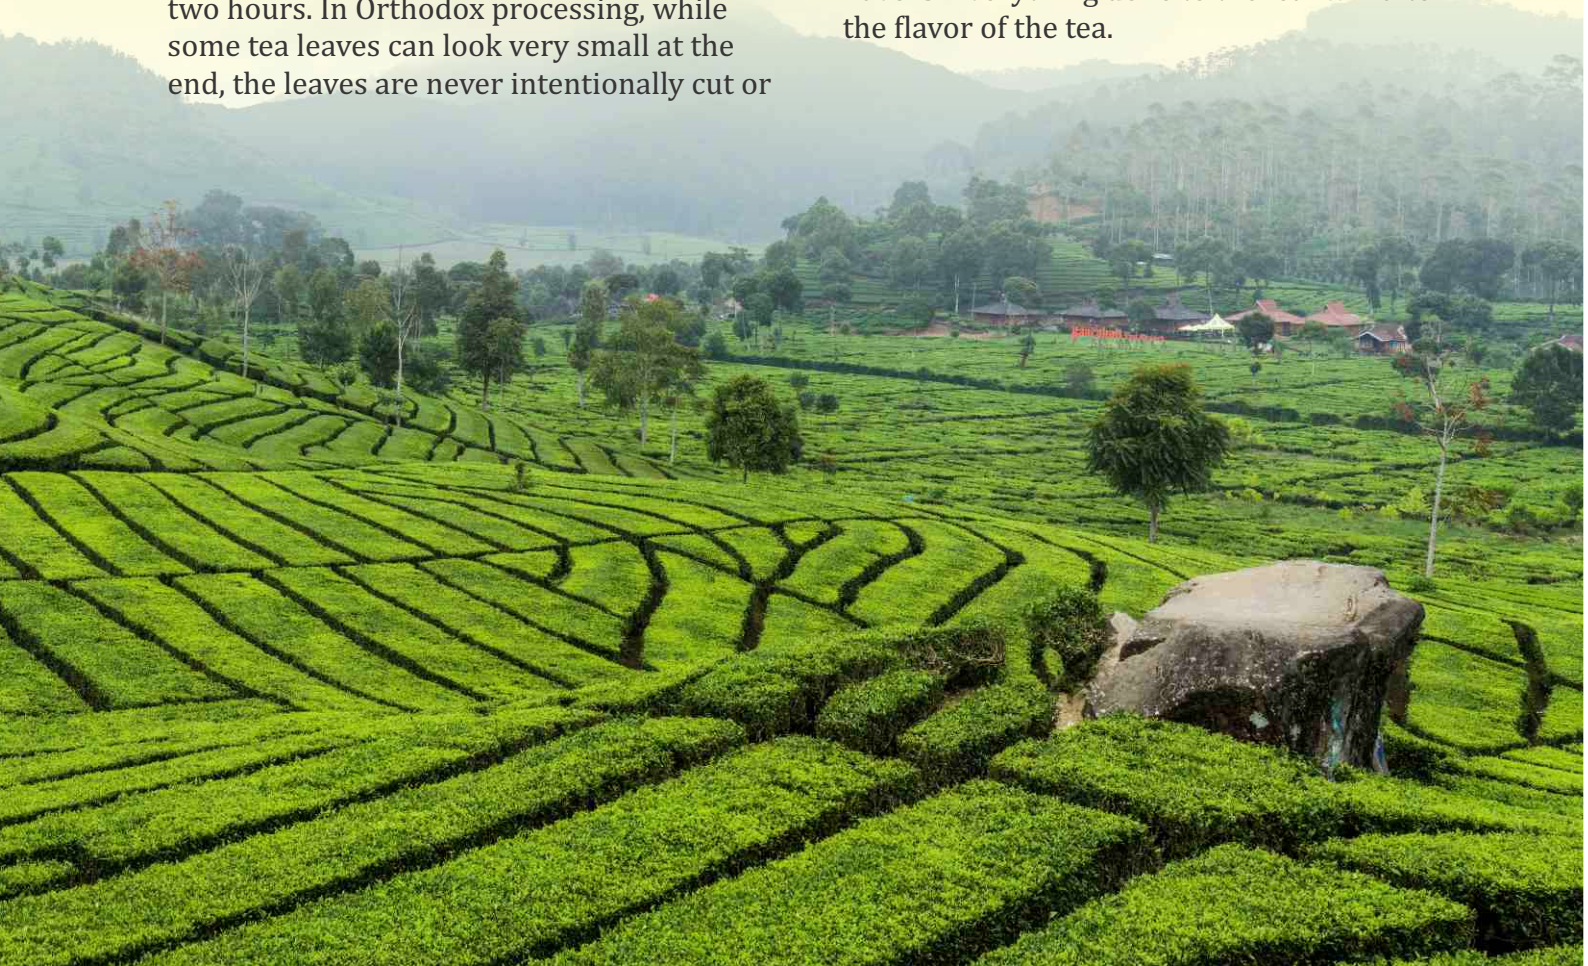

industry, in an effort to save time (a single batch of tea otherwise can take over a day to produce) and money.

The three basic differences between Orthodox and CTC teas are:

1. The appearance of the leaf Orthodox production seeks to maintain the integrity of the leaf, whether completely it's hand-made or with assistance from rolling machines and such. The tea leaves are not chopped, shredded, minced, etc. The shapes produced vary tremendously, but no matter whether it's green tea, oolong or black, Orthodox processing uses the wholeness of the leaf itself to create a diverse range of flavors in the cup. By contrast, CTC teas do not rely on the wholeness of the leaf.

2. The machinery involved CTC is produced on a machine which takes fresh, whole leaves and macerates them (crushing, tearing and curling them, hence the name). The ground up leaf is rolled into little pellets and oxidized. The tea produced visually resembles Grape Nuts cereal or large coffee grounds. Because the leaf is completely broken up, every part of the process moves very quickly. A whole batch can take just two hours. In Orthodox processing, while some tea leaves can look very small at the end, the leaves are never intentionally cut or torn apart. They are carefully rolled and handled just enough to produce a certain flavor, and their production relies on true tea artisans who have trained for years - in many cases, generations - to make that specific tea.

3. The flavor profile As mentioned, CTC was invented specifically for black tea production. These fast-infusing teas are ideal for the tea bag industry, as well as for use in spicy chai blends and iced tea (because of the color). Their flavor is very one-dimensional: bold, powerful and brightly coloring with a pungent astringency. Orthodox teas - because the leaf is not treated the same way - don't produce this type of color and body. However, CTC cannot produce the tremendous range of flavor and aroma which Orthodox teas are loved for. First of all, you can't use the CTC method to make white teas, oolongs, etc. The shredded leaf oxidizes too quickly. There are a few CTC green teas, but this is accomplished by steaming the leaves to prevent oxidation. That's about as elaborate as it gets. Secondly, because Orthodox production requires so much time, the tea maker is able to draw out and develop very nuanced flavors. Everything done to the leaf will alter the flavor of the tea.

Darjeeling Tea occupies a place of pride for the whole of India. The aroma and taste of Darjeeling Orthodox tea is unparalleled in the world. There area a total of 78 tea estates in the hills which have been accorded the status for its produce, as Darjeeling tea by Tea Board of India. These estates cover over 17,500 hectares producing over 9 million Kgs of Tea engaging about 50 percent people of the District.

The Darjeeling Tea industry is the mainstay of the economy up in the hills and provides a rewarding life to its workers by way of a steady livelihood and other facilities like housing, statutory benefits, allowances, incentives, creches for infants of working mothers, children's education, integrated residential medical facilities for employees and their families and many more.

In Darjeeling the first trial plantation of seed was planted at an altitude of 700 feet by Dr A Campbell and in 1845 an experimental nursery in Darjeeling was set up by the Government. In 1847 the Government planted a nursery at Lebong and the rest, as they say , is history.

Tea plantations in Darjeeling are restricted to Darjeeling and Kurseong sub-divisions only. Kalimpong sub-division was left out as it already had agricultural holdings and reserve forest.

"What better way to
suggest friendliness
– and to create it,
with a cup of tea
J. Grayson Luttrell

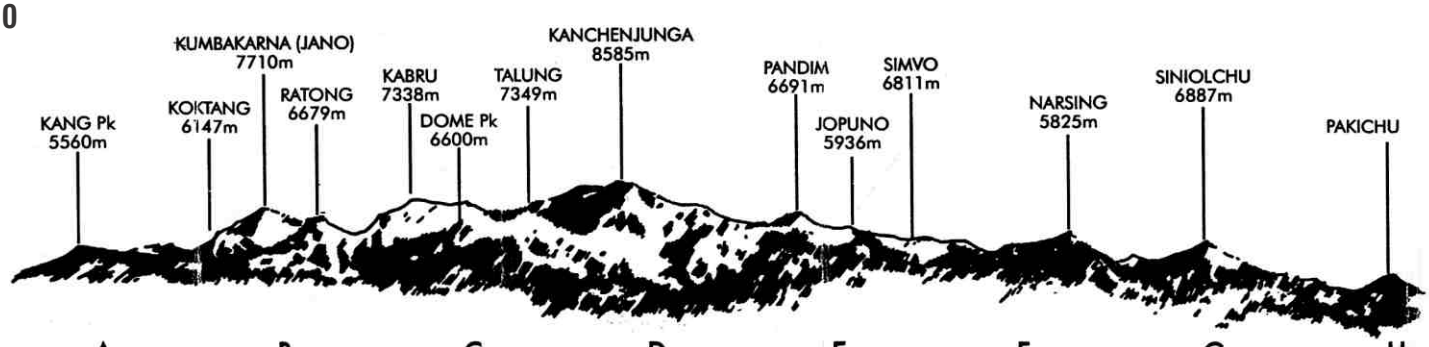

"The music of tea
is the melody
that soothes me."

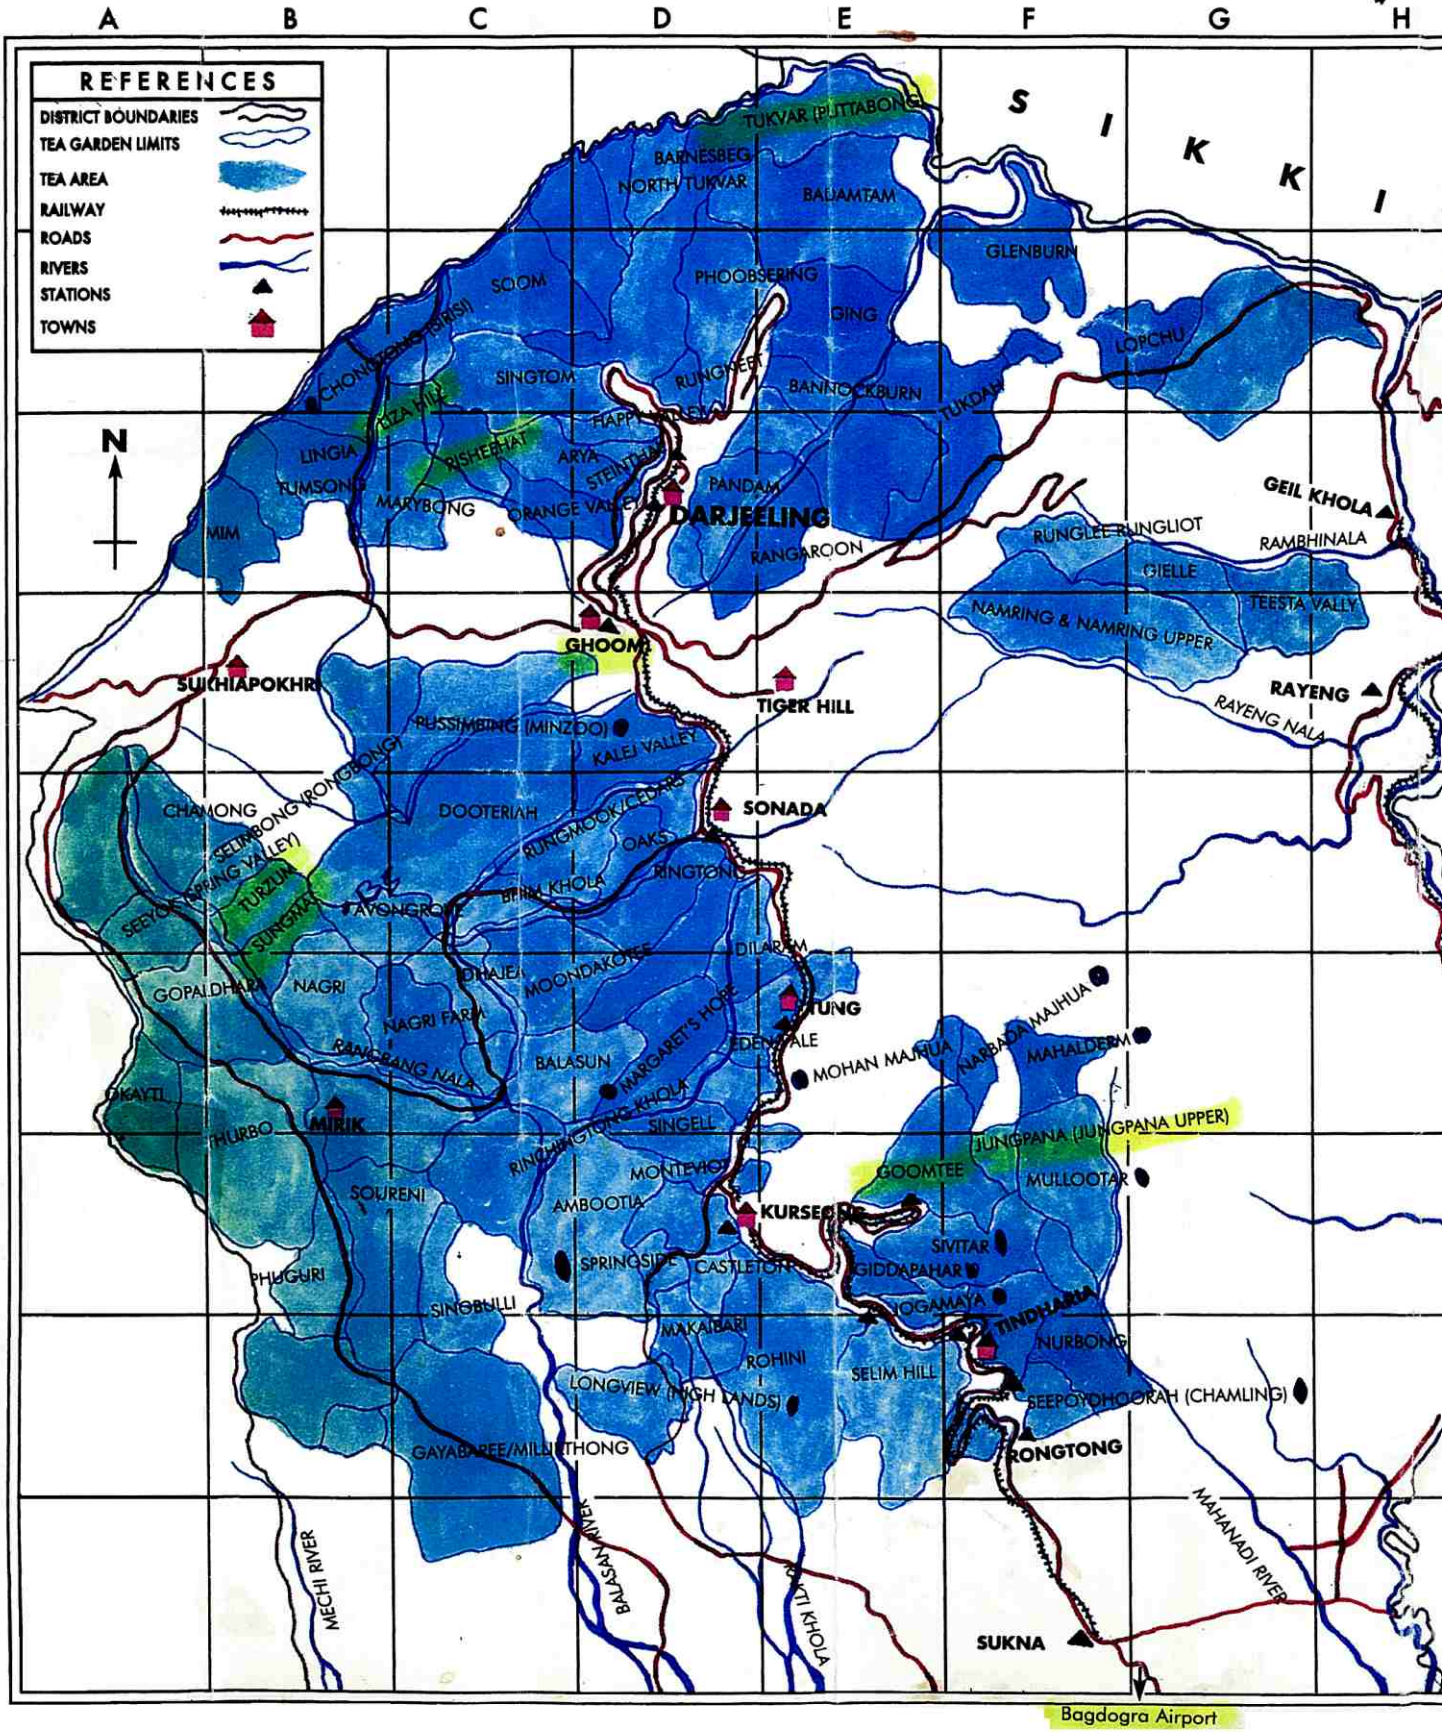

Morgan Christiansen

DARJEELING

The Champagne of Teas

LOCATION

Darjeeling is a town in West Bengal, India located in the Mahabharata Range and bordered by the Himalayas. It is the headquarters of the Darjeeling district.

CLIMATE

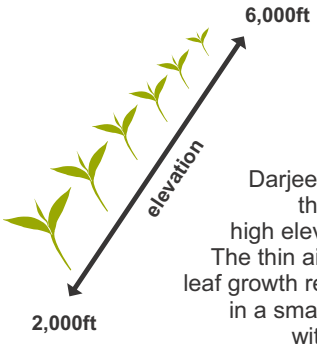

Seasonal weather can determine the outcome of any batch of tea. It can affect the quantity and quality, which then affects the price and demand.

Long, cool winters

Cool to warm, breezy summers

Monsoon rains

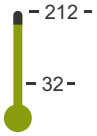

GEOGRAPHY

Darjeeling tea thrives at high elevations. The thin air slows leaf growth resulting in a smaller leaf with more concentrated flavor.

FLAVOR PROFILE

200 degrees

3 minutes

Darjeeling tea is made from the Chinese variety of the tea plant called Camellia sinensis var. *sinensis.* It is prized for its fresh and delicate nuances of flavor with some astringency.

Darjeelings are best enjoyed when made with slightly less than boiling water and a shorter steeping time.

SEASONAL VARIATIONS

FIRST FLUSH
Light-colored, fresh, gentle, aromatic, astringent
Picking : March-April

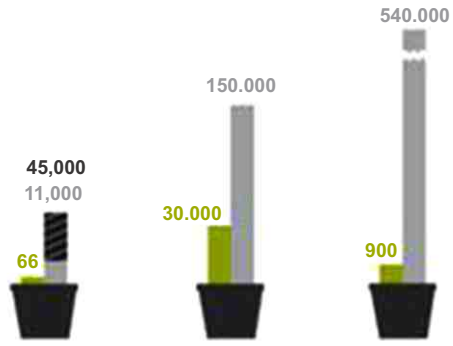

SECOND FLUSH
Amber-colored, full, rich, muscatel, less astringent
Picking : May - July

AUTUMNAL FLUSH
Darker color, full, balanced, less astringent
Picking : Sept - Nov

PRODUCTION

Tones of tea produced annually
Number of gardens

Around 45,000 tons are sold annually worldwide, but only 11,000 tons are actually produced. This doesn't add up!
Which means much of the tea sold as Darjeeling is counterfeit
Most gardens in Nilgiri are less than 25 acres.

THE STORY OF DARJEELING

The Chinese monopoly on the tea trade made it difficult for the British to get enough tea. Several attempts had been made to grow tea in India and eventually the British sent a spy (Robert Fortune) into China to discover the secrets of tea in order to break the monopoly. With the success of tea growth in India, the British were able to meet their own needs. In 1947 British rule would eventually come to an end as India gained independence and took over the tea gardens and continued production.

Chinese tea monopoly — **British demand tea** — **British fail attempt at tea** — **British spy on Chinese** — **British succeed at growing tea in India** — **India gains control**

Barnesbeg tea garden is situated 17 kms west of Darjeeling. This picturesque garden facing the majestic peaks of Kanchenjunga stretches from 780 feet to 3200 feet above sea level and enjoys a balmy, cool weather, with the Little Rangeet river gushing down the valley.

Invoice No. DJ-4	Grade FTGFOP1	Price $ 20.00

Prices are in USD and on per kilogram basis, FOB Kolkata

Darjeeling
first flush

Barnesbeg Organic - Darjeeling - first flush

The name “Barnesbeg” was probably derived from Barnes' bagh or garden. Slopes and a moderate climate, bring out the best in the bushes. A dual manufacturing process allows the garden to make both black and green teas. The superb green teas, famous for their health giving properties, are much sought after.

Invoice No.	Grade	Price
DJ-6	FTGFOP1	$ 19.00

Margarets Hope - Darjeeling - first flush

Margaret´s Hope... produces some of the most exquisite teas in the country, including some rare white teas. These originate from younger tea trees, the rolling and fermentation processes are ever so gentle to enhance the delicate flavour of the leaves. A visually stunning tea, the buds and leaves are left whole, resplendent with their silvery tips.

Invoice No.	Grade	Price
DJ-5	FTGFOP1 (CH) Spl	$ 21.00

Margarets Hope - Darjeeling - first flush

Earlier known as Bara-Ringtong, the unusual name 'Margaret's Hope' was given to the garden in 1927. The teas grow at elevations of 915 metres to 1830 metres and are predominantly China bushes creating some of the most exquisite teas in the country.

Invoice No.	Grade	Price
DJ-16	FTGFOP1 (CH) Spl	$ 20.50

Margarets Hope - Darjeeling - first flush

Named after his daughter by Mr. Cruikshank, Margaret's Hope is a world famous name when it comes to Darjeeling Tea. Orthodox

Nalani - Assam Orthodox - Second Flush

Nalani the garden is situated on the bank of river Dibru and adjacent to the Brahmaputra river. The teas from this estate are gritty, strong in colour and brisk. Guttiness is also a special character they possess. The well rolled heavy black teas with strong character and bright infusion form the bedrock of its many well-loved tea blends. The tea estate uses fermented juice of bokain seeds to arrest pest growth and reduce chemical usage on the plantation.
